Save Our Sea Turtles

Sea turtles have swum in the oceans for millions of years. Today, many kinds of sea turtles are endangered. Every year, female turtles crawl onto sandy beaches at night to lay their eggs. Bright lights and noise near the beach can frighten them away. After about two months, the baby turtles hatch and rush towards the sea. Plastic is one of the biggest dangers to sea turtles. A floating plastic bag looks like a jellyfish, which is food for some turtles. When a turtle eats plastic, it can become very sick. We can help by using fewer plastic bags, never leaving rubbish on the beach and keeping beaches dark and quiet during the nesting season. Small actions can make a big difference.

a) When do female turtles lay their eggs?

b) What can frighten the turtles away from the beach?

c) Why do some turtles eat plastic bags?

d) Give two ways we can help sea turtles.
